SUMMARY

Informatics graduate from Gunadarma University with a strong interest in Artificial Intelligence, Machine Learning, AI Engineering, and Agentic AI. Experienced in developing AI-based projects involving Machine Learning, Computer Vision, Retrieval-Augmented Generation (RAG), and Agentic AI systems, with a focus on building intelligent solutions that leverage data, reasoning, and automation to solve real-world problems. Continuously developing expertise in AI model development, data processing, Large Language Models (LLMs), RAG, AI Agents, and AI integration, with a strong commitment to problem-solving, continuous learning, and creating efficient and innovative AI solutions..

PROFESSIONAL EXPERIENCES

PT Real Link Technology

Mar 2026 - Aug 2026

System Engineer Intern

- Participated in an mail migration project from Zoho Mail to Microsoft 365, supporting the migration process and infrastructure setup.
- Installed and configured Synology and QNAP NAS Servers to support the project infrastructure.
- Performed Active Directory domain joining to ensure proper integration with the existing IT infrastructure.
- Prepared technical project documentation, including User Guidance, Project Handover Documents, and User Acceptance Testing (UAT) documentation.
- Monitored the mail migration process to ensure smooth execution and minimize disruptions to users' daily operations.

PROJECT EXPERIENCES

Resident Evil Lore AI Chatbot – Retrieval-Augmented AI Chatbot for Resident Evil Lore Explanation

2026

Technology Stack: Google Gemini 2.5 Flash, LangChain, ChromaDB, Streamlit, RAGAS

- Collected and structured Resident Evil lore data from multiple game entries into JSON format, serving as the knowledge base for the chatbot system.
- Designed and implemented a data ingestion pipeline using LangChain's RecursiveCharacterTextSplitter to perform text chunking, followed by generating vector embeddings and storing them in ChromaDB as a persistent vector database.
- Built a Retrieval-Augmented Generation (RAG) pipeline using LangChain, integrating ChromaDB as the retriever with similarity search.
- Utilized Google Gemini 2.5 Flash as the Large Language Model (LLM) to generate context-aware responses grounded in the retrieved documents.
- Deployed the chatbot as an interactive web application using Streamlit.

Skin Disease Detection – YOLOv8-Based Skin Disease Detection System

2025

Technology Stack: Python, Roboflow, OpenCV, Google Colab, YOLOv8

- Developed a computer vision-based system for detecting and classifying skin diseases from images using the YOLOv8 object detection model.
- Prepared and annotated a skin disease image dataset covering multiple disease classes for training and evaluation purposes.
- Applied image preprocessing and dataset preparation techniques to improve data quality and support the model training process.
- Trained and evaluated the YOLOv8 model to detect skin disease categories from input images and analyzed its performance using standard evaluation metrics.

dAI.ly Notes – Agentic AI-Powered Daily Notes with Voice Chat

2026

Technology Stack: Google Gemini 2.0 Flash, Dify Workflow, Node.js, Vanilla JavaScript (ES6), Web Speech API, HTML5, CSS3, Vercel

- Designed and developed an interactive full-month calendar-based daily notes web application with autosave mechanism using localStorage.
- Implemented an Agentic AI system using the ReAct (Reasoning and Acting) loop pattern via Dify Workflow, where Google Gemini 2.0 Flash analyzes user prompts and generates structured JSON actions.
- Built a two-way adaptive Voice Chat feature using the browser-native Web Speech API, integrating SpeechRecognition (STT).
- Developed a secure Node.js proxy server using the native HTTP module and AbortController API to protect the Dify API key from client-side exposure.
- Built the entire frontend using Vanilla JavaScript.
- Deployed the application as a serverless function on Vercel.

ScopeCV – AI-Powered CV Screening & Talent Intelligence Platform

2026

Technology Stack: Next.js 16 (App Router), TypeScript, Tailwind CSS, Node.js, Express.js, Prisma ORM, SQLite, Python, FastAPI, Google Gemini API, PyPDF, RESTful

- Designed and developed a full-stack automated talent screening and ranking platform utilizing a microservices architecture (Next.js frontend, Express backend orchestrator, and FastAPI AI engine).
- Implemented an LLM-powered candidate evaluation pipeline using Google Gemini API to parse unstructured PDF resumes, benchmark qualifications against job requisitions, and output structured JSON data containing fit scores (0–100%), strengths, and gap analyses.
- Built a high-throughput batch analysis pipeline capable of processing bulk CV uploads asynchronously with PyPDF text extraction and secure backend webhook callbacks.
- Engineered database models using Prisma ORM with SQLite, ensuring zero mock dependencies, persistent candidate lifecycle tracking, and secure server-side API key isolation.

Corn Leaf Classification – A Classification Model for Corn Leaf Disease

2025

Technology Stack: Python, TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib, TFLite, TensorFlow.js

- Engineered an end-to-end computer vision pipeline to classify maize leaf diseases, implementing stratified data splitting and custom data augmentation (rotations, spatial transformations) to balance a 4,920-image dataset across 4 conditions.
- Implemented a robust data preprocessing and augmentation pipeline using OpenCV and Imgaug to address class imbalance and increase model generalization.
- Designed and fine-tuned a CNN model integrating Batch Normalization, L2 regularization, and dynamic callbacks (EarlyStopping, ReduceLROnPlateau), achieving 91% test accuracy with robust generalizability evaluated through Confusion Matrices and Classification Reports.
- Exported and converted the trained model into SavedModel, TFLite, and TFJS graph model formats, enabling lightweight, low-latency client-side and edge inference.

Socio-Economic Clustering & Regional Profiling – A ML Pipeline for Indonesian Disparity Analysis

2025

Technology Stack: Python, NumPy, Pandas, Scikit-Learn, Yellowbrick, Matplotlib, Seaborn, PCA

- Built an end-to-end data processing and unsupervised learning pipeline integrating multi-source BPS socio-economic datasets (per capita expenditure, minimum wage/UMP, and average labor wage) across 1,080+ regional records with automated preprocessing, outlier treatment, and feature scaling.
- Implemented K-Means clustering optimized via the Elbow Method and Silhouette Visualizer to segment regions into 4 distinct economic archetypes; applied Principal Component Analysis (PCA) retaining 95% variance, increasing the Silhouette Score from 0.714 to 0.757.
- Formulated a supervised classification framework using Decision Tree and Random Forest models on derived cluster labels, attaining 100% test accuracy and weighted F1-score across test splits to ensure high model generalization and robust cluster boundary separability.

EDUCATION

Informatics (Bachelor's Degree)

2022 – 2026

Gunadarma University

- Achieved a GPA of 3.81/4.00
- Worked collaboratively as part of a team in various projects, demonstrating strong communication and collaboration skills
- Relevant Subjects: Big Data Computing, Artificial Intelligence, Go Language, C#, Python, Data Science.

Machine Learning Engineer

February 2025 – July 2025

CodingCamp powered by DBS Foundation

- Developed classification models for text, image, and audio data using Python and libraries such as TensorFlow and scikit-learn.
- Actively contributed to the development of Kicau Finder for Capstone Project, a deep learning-based multiclass classification system designed to identify Amazon bird species from audio recordings.
- Strengthened essential soft skills, including problem-solving, teamwork, and professional communication, particularly in presenting project results to an audience.
- Relevant Subjects: Deep Learning, Data Visualization, Data Analysis, Data Processing, Machine Learning, Supervised Learning, Unsupervised Learning.

Associate Data Scientist

September 2025 – May 2026

Lembaga Sertifikasi Profesi Gunadarma University

- Completed a structured Data Science training program organized by Gunadarma University, covering the end-to-end data science workflow through two real-world case studies.
- Performed data preparation and preprocessing, including data collection, exploration, cleaning, validation, data construction, and labeling.
- Developed Machine Learning models through model design, training, and performance evaluation.
- Designed and implemented model deployment scenarios to make the developed models ready for practical use.
- Relevant Subjects : CRISP-DM, Data Preprocessing, Exploratory Data Analysis (EDA), Data Cleaning, Data Transformation, Feature Engineering, Data Labeling, Machine Learning, Model Training, Model Evaluation, Model Deployment, and Data Visualization.

CERTIFICATES

Certification: BNSP – Associate Data Scientist

Certification: Applied Machine Learning

Certification: Data Visualization

Certification: Machine Learning for Beginner

Certification: Machine Learning Engineer

Certification: English for Business Communication

SKILLS

Hard Skills: Python, Go Language, C#, Roboflow, Machine Learning, Ultralytics YOLO, Streamlit, FastAPI, Dify Workflow Automation, PostgreSQL, MySQL, ChromaDB, Artificial Intelligence, Retrieval-Augmented Generation.

Soft Skills: Problem Solving, Decision Making, Collaboration, Time Management, Adaptability.

Languages: Indonesian (Native), English (Intermediate Proficiency)
